PROCESS

The entire kitchen was removed. All new electrical wiring brought up for the new recessed lighting, GFIC outlets, and under-cabinet lighting. The sink was relocated and all plumbing was updated. The ceiling was redrywalled to match the family room ceiling. New flooring throughout. New custom cabinetry and crown molding installed.

MATERIALS

Custom Maple wood cabinetry, Quartz Organic White counters, Vitra Art frosted glass mosaic tile, Oggetta Luce Amore custom pendants, custom wall unit also in Maple wood.

PROCESS

Working hand in hand with the homeowner and their love for Shaker style made this remodeling a true work of hand craftsmanship and talent. Everything was removed, electrical upgrades and the plumbing upgrades were completed. Beams on the ceiling removed then new drywall applied. All trim hand made by the owner and hand painted a true Shaker color, then carefully installed. A true masterpiece and labor of love.

MATERIALS

Custom Maple wood cabinetry, Elegant Corian tops, and range splash. Porcelain wall tile brick set. Counter depth refrigerator, and all new stainless steel appliances

PROCESS

Opening up the kitchen allowed more light from the open family room. The Rustic Alder cabinetry matched the ceiling beams in the family room and the backsplash tile and glass complemented the dual open fireplace also in the family room. The hardwood floor was patched due to foot print changes then refinished by homeowner. A gorgeous kitchen for the home chef be proud of and enjoy

MATERIALS

Custom Rustic Alder wood cabinetry. Quartz counter tops with an undermount stainless steel sink, glass and ceramic tile on the backsplash, all new appliances including dual fuel range, a second convention built-in oven, and a convection microhood making this kitchen a chef's delight.

PROCESS

We removed the existing floor to ceiling brick facing and hearth. Repaired the dry wall. Installed the remote controlled fireplace insert. Built the Maple wood custom mantel. Installed the new hearth and stone. Installed the new glass and ceramic facing. Painted the new custom mantel an accent color. Primed the wall and painted for a new up to date finished look.

MATERIALS

New direct vent gas insert fireplace with remote control and blower fan. Ledge stone on the raised hearth, glass and ceramic tile facing. Custom made Maple wood mantel.

MATERIALS

Grandeur porcelain 8½ x 17 tile with matching porcelain chair rail and trim. Stone and Pewter Accents glass tile, Quartz baseboards, custom Cherrywood cabinetry, custom granite top, rain shower and adjustable hand held, Toto dual flush commode, treated glass custom frameless shower doors.

PROCESS

Precision and attention to detail was required to create this oasis. Minimal cut tiles, precise placement of accessories and easy maintenance. Converting the hinge door to a pocket door almost doubled the visual space and made using this bathroom much easier. Showering is now relaxing, delightful and beautiful.

PROCESS

The existing bathroom was removed as well as part of the linen closet return wall to enlarge the bathroom as much as possible. The 18" deep vanities at the 34½" height added more visual space to this room. The drawers on the bottom of the vanities gave additional storage. Using dura ceramic flooring gave the appearance of ceramic tile without the coldness to the feet. Maintenance free and durability equals a bathroom for a lifetime.

MATERIALS

Custom made cultured granite panels both smooth and tile pattern, trim, seat and base. Oil rubbed bronze finish on faucetry, safety bar and accessories, custom Cherrywood cabinetry, Corian top and integral bowls, custom beveled mirror, frameless bronze finished shower doors.

3D Model

Accessible design creates environments in which people with disabilities can move around freely. I believe in the importance of design that lets people easily access and enjoy space that they interact in regardless of any disability.

ROLL-IN SHOWER

Sometimes lifting ones foot and leg 4" to 6" to enter a traditional shower stall is impossible. When that challenge occurs, it's time for a curbless entry, an ADA approved lift up padded seat and wonderful ADA safety bars to relieve strain on the care provider and user.

ROLL-UP SINK

Elegance and style can be found in accessibility. This roll-up sink features pipes that are covered with a shroud to protect the seated person from burns. The single handle faucet can work by touch or by using the lever. The mirror can tilt up or down to satisfy the needs of both standing users and seated users.

ROLL-UP VANITY

Having a double bowl sink with one standing user and one seated user may seem problematic, however, by removing the extra sink base cabinet and drawer base cabinet, creating an end panel and installing bracing at the wall, a seated user may now use their side of the vanity. The plumbing for the sink and faucet was moved back to the wall for safe and easy use.

Accessibility

ACCESSIBLE DESIGN

PROCESS

When working with specialized remodeling safety is the number one priority. Each job is completed according to the individual's needs. Shown is a home therapy room with pads on the walls and drop soffit, rubberized floor tiles to soften falls, lexan shower doors for protection in case there is a fall, ADA approved safety bars and a hand held shower. Also shown is a "small cave" room to help with calming needs.

THANK YOU
